

# Velvich Infra CRM

User Guide — for all users

Project, collections & operations system

Salem, Tamil Nadu · Phase 1

# 1 • Introduction

The Velvich Infra CRM is a secure, mobile-friendly system for managing projects, government-payment collections, staff, field activity and documents. It replaces the old shared-key HTML prototype with **per-user login**, **owner-controlled permissions**, automatically computed finances, and an **AI assist layer** that turns a photographed bill or a typed sentence into an editable draft.

## Who this guide is for

Every user, whatever their role. Sections are labelled with the **capability** needed; if you don't see a feature, your role or the Owner's settings haven't granted it.

| Role                      | What they can do                                                                           |
|---------------------------|--------------------------------------------------------------------------------------------|
| Owner / Principal         | Full control. Manages users, permissions, settings, audit. Can never be locked out.        |
| Manager                   | Runs projects day to day. Everything except user/permission/settings/audit administration. |
| Accounts / Office         | Logs money & documents, manages collections, exports reports.                              |
| Field engineer / Surveyor | Mobile-first. Views/updates projects, logs activities, uploads documents.                  |
| Viewer                    | Read-only across the system.                                                               |

Roles are starting points. The Owner can grant or revoke any individual capability for any user at any time — see §5, Users & Access.

## 2 · Signing in & first-time setup

---

Open the CRM in any browser. On a brand-new system the first visitor is taken to **Setup** to create the organisation and the Owner account. After that, everyone signs in with their own email and password.

The image shows a sign-in screen for 'Velvich Infra CRM'. The screen has a light blue background. In the center, there is a white rounded rectangle containing the following elements: the text 'Velvich Infra CRM' in bold blue, the text 'Sign in to continue' in a smaller grey font, a label 'Email' above a white input field, a label 'Password' above another white input field, and a blue button with the text 'Sign in' in white.

The sign-in screen. Each user has their own credentials — no shared keys.

### Forgot your password?

Ask the Owner to reset it, or use the reset link (email). Never share a login.

### 3 • Dashboard

dashboard:view

Your landing page: active projects, income received, expenses, net, recent transactions, overdue receivables and upcoming payment milestones — all computed live.

## 4 · Projects & pipeline

projects:view

projects:create

projects:edit

Track every project through 8 stages plus On Hold. Only **name** and **type** are required to create one — everything else is optional.

### Using the Kanban board

1. Open **Projects**. Each column is a stage.
2. **Drag a card** to another column to move the project — the change and who made it are recorded in the stage history automatically.
3. Switch to **List** view with the toggle if you prefer a table.

The screenshot shows the 'Velvich Infra' dashboard with a sidebar menu on the left containing: Dashboard, Projects (selected), Clients, Staff, Transactions, Accounts, Ledger, Receivables, Activities, Reports, Users & Access, Settings, and Audit Log. The main area is titled 'Projects & Pipeline' with a subtitle 'Drag a card between stages to update it'. It features a Kanban board with four stages: Enquiry (0 cards), Survey (0 cards), DPR Preparation (1 card), and Submitted. A card is currently in the 'DPR Preparation' stage, titled 'Rasipuram Bypass DPR' with details 'DPR · PWD Salem Division' and '₹25.00L'. A green progress bar indicates 20% completion. In the top right corner, the user 'Er. V. Udhayakumar' is listed as the 'OWNER' with an edit icon. Below the board, there is a 'List' toggle and a '+ New project' button. At the bottom of the interface, a note states: 'Kanban board — drag a project card between stages to update it.'

### Creating a project (with inline client)

Click **New project**, fill name and type, optionally pick a client — or add one on the spot with the + button without leaving the form.

## 5 · Transactions — three ways to log money

transactions:view

transactions:create

Log income and expenses by **photo**, by **sentence**, or **manually** — all three produce the same result. Amounts always show in Indian rupees; totals (received, pending, expense, net) are computed.

**Velvich Infra**

-₹4,500.00

**Mobilization Advance**  
01 May 2026 · Rasipuram Bypass DPR  
+₹5,00,000.00

Transactions list with live totals and filters by type and month.

### AI assist (always an editable draft)

1. Click **AI add**.
2. **Type a line** like “₹4,500 diesel for Rasipuram bypass yesterday”, or **upload/snap a bill**.
3. Review the draft the AI proposes — **every field is editable**.
4. Confirm to save. Nothing is ever posted without your OK.

AI assist: type a sentence or snap a bill — both create an editable draft.

If AI is turned off or unavailable, the full manual form is always there.

# 6 · Clients & staff

clients:view    staff:view

Keep departments (PWD, TNRD, NHAI, ...) with multiple contacts each, and track staff with their roles and project load. Over-allocated staff are flagged.

# 7 · Money: accounts & monthly ledger

accounts:view   ledger:view

Per-project profit & loss and collection % are computed from transactions — never typed. The monthly ledger shows opening balance, credits, debits, closing and a running statement; closing of one month equals the opening of the next.

Users list — invite, set role, activate/deactivate, open permissions.

## The permission matrix

1. Open a user and click **Permissions**.
2. Each capability shows three choices: **Inherited** (from the role), **Allow**, or **Deny**.
3. An explicit Allow/Deny always overrides the role default. Save — it takes effect on the user's next action and is recorded in the audit log.

## 14 · Good habits

---

- Use your own login — never share credentials.
- Always review an AI draft before confirming it.
- Money figures (P&L, collection %, balances, aging) are computed — don't try to hand-edit them; correct the underlying transactions instead.
- Owners: review the audit log periodically and keep at least one active Owner.
